Wiring diagram

Please DO NOT connect "DIM-" to "LED-" or "DIM+" to "LED+".

Note

1. Please carry out the sample or small batch test before the batch purchase.
2. The number of drives and the length of wire connections are determined by the following factors:
 - a. Current output capacity of the dimmer.
 - b. The interface of the driver consumes current , this product is less than 1mA.
 - c. The size of the connection wire, and is recommended to use less than 20AWG.
 - d. Install environmental interference, avoid wiring with high voltage or interference source. If you can't avoid it, you can consider using shield wire.
3. It is recommended that the number of drives and the dimming connection length are: ≤ 20 PCS, ≤ 30 m.
4. It is recommended to use a dimmer with active, isolated and strong output current capacity. The driver not support non-isolation dimmer.
5. This product is compatible with various active or passive dimmers. If a few dimmers are not compatible, it is a normal case and can be contacted us for confirmation.
